

Copia International Partners with babyTEL to Provide Fax over IP Service

February 7, 2013 - Copia, a leader in Faxing and e-mail automation, announced the successful completion of interoperability testing of its CopiaFacts Fax Server with babyTEL Fax over IP (FoIP) services.

Copia has developed a comprehensive range of fax, voice and e-mail solutions to suit the requirements of small companies and large government agencies.

With the powerful combination of a Secure Cloud fax server and reliable T.38 fax lines, babyTEL and Copia can provide a secure and full-featured fax server for in-house and/or cloud virtual systems without any customer premise hardware.

“Faxing over the Internet (FoIP) has improved to the point of being ‘almost as good as’ normal phone lines, but is it as secure as the PSTN? Now the answer is, yes, because of the integration of babyTEL, Copia International and Commetrex. This integration provides a secure VPN connection from the FoIP computer and the babyTEL ISP.” said Steve Hersee, President of Copia International.

babyTEL is the world leader in T.38 SIP Trunking over the internet, certified by major fax server manufacturers and technology providers. Any enterprise planning for business continuity, expansion, consolidation, multiple offices, international clients, mobile workforce or migrating locations to a virtual fax server will appreciate the management flexibility and cost reduction offered by babyTEL T.38 SIP Trunking.

“We are very excited to have our FoIP services certified for interoperability with Copia International,” said Stephen Dorsey, CEO, babyTEL Inc. “This partnership will provide a reliable and secure faxing solution for demanding enterprise customers.”

About babyTEL Inc.

Within its Technology as a Service (TaaS) framework, babyTEL develops advanced communication technologies to provide cutting-edge voice communication services. babyTEL provides feature rich VoIP home phone, business phone, SIP Trunking, mobile and fax services through its Agent and Reseller network in over 7000 locations in the USA and Canada with Social Network services available world-wide. To meet challenging and expanding customer needs, babyTEL customizes its residential and corporate telephony services in-house using its own development resources. babyTEL customer and network support teams benefit from the availability of in-house developers to offer customers more effective and timely support.
